DESTINATION

Keele University

Studying Physical Geography

Why have you decided to study Geography at University? I am really interested in landscapes, environments and the lithology of different places, as well as being passionate about collecting rock samples and landscape photography.

How do you think the department at College prepared you for this? The many field trips for the earth science subjects enabled me to expand my ability to field sketch landscapes and to further understand my photography. I also learned vast amounts on characteristics of rock strata and how this would have formed in certain environments which I am interested in studying further at university.

Any other quotes about studying Geography and Geology at College and what you enjoyed about it? Freedom to research practical elements of study and subjects which are interesting that may not be on the spec of work. Using technology which may be used in the field also was great. Teachers are enthusiastic and willing to go the extra mile to find more information.
