JOE'S BACKGROUND

HIGH SCHOOL

The Discovery Academy

GRADE ACHIEVED IN A LEVEL GEOLOGY

A*

DESTINATION

Imperial College London
Studying Geology

Why did you decide to study Geology at University?

The A Level Geology course introduced me to the broad field of Geology, and gave me insight into the numerous career paths and opportunities for research and study in this field. I have decided to study Geology at university in hopes of pursuing a career relating to Economic Geology, this may involve working in the oil and gas industry, or even the mining industry.

How do you think the department at College prepared you for this?

I was prepared by the Earth Sciences department at college for a geology course at university in a number of helpful and important ways. The field trips to places like Castleton and Wren's Nest allowed me to develop skills essential to a Geologist, such as taking field measurements, field sketching, note taking, and scientific presentation.

Any other thoughts about studying Geology at College and what you enjoyed about it?

Geology was the best science of the three that I studied at college, because it was the only one where the experiments could involve Skittles, Swiss Rolls, and Lego. Studying Geology at college made me realise it was far better than Biology, Chemistry, or Physics, because it combined the most interesting aspects from all of them.
